

Danish quality  
– Made in Denmark

All our burners are manufactured and assembled in our factory in Vejen, Denmark.

We are sustainable, we reduce CO<sub>2</sub> and save up to 40% of propane gas consumption.

Please, contact us for more information.

**E-Therm for Municipalities**  
for disinfection and  
ruderals control

In municipalities, cities and parks.

E-Therm ET500-700-1000

Combi

ENVO-DAN's ET-programme is developed with a specific consideration to the working environment. Partly the noise reduction is so efficient, that several municipalities have asked to get an indicator mounted that can show that the burner is running, because the noise from the tool carrier far from drowns the silent Burner. In addition, the Weed Burner is developed to front mounting, which ensures that the driver not constantly has to look over the shoulder.

ENVO-DANs E-Therm burners uses 40 % less propane gas and thereby also less CO<sub>2</sub>, which ensures, that the driver is not exposed to same amounts of CO<sub>2</sub> as on the previous known burners.

## Datasheet – Specifications:

- Propane consumption: 6 Kg/h
- Working speed: approx. 4 km/h (depending on the type and quantity of weeds)
- Working width: 50/100 cm (or according to customer demands)

## Advantages

- Low noise
- Energy efficient – average reduction of gas consumption: - 40%
- Low CO<sub>2</sub> emission
- Meets the demands of tomorrows according to the working and surrounding environment.
- With a standard frame for mounting on any type of tool carrier.
